

ABSTRACT

In summary, therefore, the inventive method and apparatus enables one to mount
5 and dismount an implement, such as a snow plow, from a vehicle, such as a pickup truck, with a
heretofore unknown simplicity. The method mounting the plow basically comprises the steps of
driving the vehicle toward the blade assembly until the frame assembly mounted on the front of
the vehicle is in operative proximity to the blade assembly. Generally, that proximity is
established by just touching the blade assembly with the frame assembly.
